**Royal Sense Limited is excited to announce the official launch of our latest products in  
Medical Devices Category**

*Here are some details you might find in the launched products:*

**1) Stergic Mesh Nebulizer**

**Product Description**

A Stergic Mesh Nebulizer uses a vibrating mesh to create a fine mist, delivering medication efficiently and quietly for respiratory treatment.

**Product Details**

A Stergic Mesh Nebulizer is a portable device used to deliver medication in the form of a fine mist for respiratory treatment. It operates by forcing liquid medication through a vibrating mesh with tiny holes, creating an aerosol with optimal particle size for deep lung delivery. Unlike traditional jet nebulizers, mesh nebulizers are more compact, quieter, and faster, offering a more efficient treatment experience. They are commonly used for conditions like asthma, COPD, and other pulmonary diseases, providing quick and effective relief. Mesh nebulizers are battery-powered, making them convenient for on-the-go use. While they are generally more expensive than jet nebulizers, their ease of use, portability, and reduced noise make them a preferred choice for many patients. Regular cleaning is essential for maintaining performance.

## 2) Stergic Breast Pump

### Product Description

A Stergic breast pump extracts milk from the breasts, allowing mothers to express, store, and feed breast milk to babies.

### Product Details

A Stergic breast pump is a device designed to help mothers express milk from their breasts. It can be used for various reasons, such as relieving engorgement, increasing milk supply, or storing milk for later feeding. Breast pumps come in two main types: **manual** and **electric**. Manual pumps require hand operation, while electric pumps are powered by electricity or batteries and offer more efficiency and speed. Some models are **single** (one breast at a time) while others are **double** (both breasts simultaneously). Pumps often feature adjustable suction levels to mimic a baby's natural feeding rhythm. They are particularly useful for working mothers, those with breastfeeding difficulties, or when a mother needs to be away from her baby. Regular cleaning is essential for hygiene.

## 3) Stergic Lumia HC nebulizer

## Product Description

A Stergic Lumia HC nebulizer is a device that converts liquid medication into a mist, making it easier to inhale for respiratory treatment.

## Product Details

A Stergic Lumia HC is a medical device used to administer medication in the form of a mist or aerosol, which can be inhaled directly into the lungs. It is commonly used to treat respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and bronchitis. Nebulizers are available in two main types: **\*\*jet nebulizers\*\*** (which use compressed air to create the mist) and **\*\*ultrasonic nebulizers\*\*** (which use ultrasonic vibrations). The device typically consists of a compressor, a medication cup, and a mouthpiece or mask. Nebulizers are particularly beneficial for individuals who have difficulty using inhalers, offering a more consistent dose of medication. They are commonly used at home or in clinical settings and can deliver treatments quickly and effectively. Regular cleaning is important to maintain performance.

### 4) Stergic Lumia EC nebulizer

## Product Description

A Stergic Lumia EC nebulizer is a device that converts liquid medication into a mist, making it easier to inhale for respiratory treatment.

## Product Details

A Stergic Lumia EC is a medical device used to administer medication in the form of a mist or aerosol, which can be inhaled directly into the lungs. It is commonly used to treat respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and bronchitis. Nebulizers are available in two main types: **\*\*jet nebulizers\*\*** (which use compressed air to create the mist) and **\*\*ultrasonic nebulizers\*\*** (which use ultrasonic vibrations). The device typically consists of a compressor, a medication cup, and a mouthpiece or mask. Nebulizers are particularly beneficial for individuals who have difficulty using inhalers, offering a more consistent dose of

medication. They are commonly used at home or in clinical settings and can deliver treatments quickly and effectively. Regular cleaning is important to maintain performance.

#### **5) Stergic Walking Stick**

#### **Product Description**

A Stergic walking stick provides stability and support while walking, helping with balance, reducing strain, and preventing falls for users.

#### **Product Details**

A Stergic walking stick is a mobility aid designed to provide support and improve balance for individuals with difficulty walking or maintaining stability. Typically made of lightweight materials like wood, aluminum, or carbon fiber, walking sticks are equipped with a handle or grip for comfort, an adjustable shaft to suit the user's height, and a rubber or metal tip to ensure traction and prevent slipping. They are commonly used by people with conditions such as arthritis, joint pain, or those recovering from an injury. Walking sticks help reduce the risk of falls, ease pressure on the legs, and promote proper posture while walking. Some models are foldable or collapsible for easy storage and portability. Regular use enhances mobility and independence.

#### **6) Stergic crutch**

## **Product Description**

A stergic crutch is a mobility aid designed for support and stability, commonly used during injury recovery or rehabilitation.

### **Product Details**

A Stergic crutch is a mobility aid designed to assist individuals who have difficulty walking due to injury, surgery, or disability. It provides support by redistributing body weight from the legs to the upper body, helping the user maintain balance and mobility. Crutches typically come in two types: **\*\*underarm crutches\*\*** (also called axillary crutches) and **\*\*forearm crutches\*\*** (or Lofstrand crutches). Underarm crutches rest under the armpits, while forearm crutches fit around the forearm and require more upper body strength. Both types have adjustable lengths and padded grips for comfort. Crutches are commonly used for short-term recovery after fractures or surgeries, but can also be used by individuals with long-term mobility challenges. Proper use and fitting are essential to avoid strain or injury. Regular adjustment and maintenance are important.

## **7) Stergic Toilet Seat**

## **Product Description**

Stergic toilet seat is a hinged lid that covers the toilet bowl, providing comfort and hygiene for users during use.

### **Product Details**

Stergic toilet seat is a hinged, removable cover that rests on top of the toilet bowl, providing a comfortable surface for sitting. It typically consists of two main components: the seat itself and a lid. Toilet seats are made from various materials such as plastic, wood, or cushioned vinyl for added comfort. The seat is attached to the toilet bowl with bolts and can be adjusted to fit different toilet models. Some toilet seats come with additional features like soft-close hinges to prevent slamming, antimicrobial coatings for hygiene, or built-in bidets for added convenience. Toilet seats are available in various shapes (round or elongated) to match different toilet designs. Regular cleaning and maintenance are essential for hygiene and functionality.

## 8) Stergic Walker

### Product Description

A Stergic walker is a mobility aid with a frame, providing support and stability for individuals with difficulty walking or balance issues.

### Product Details

A Stergic walker is a mobility aid designed to provide support, stability, and assistance for individuals who have difficulty walking or maintaining balance. Typically made of lightweight materials like aluminum, walkers have a frame with four legs (or two legs and two wheels) to offer a wider base of support than crutches or canes. The user grips the handles to help distribute weight and maintain balance. Walkers are commonly used by people recovering from surgery, injury, or dealing with chronic conditions like arthritis, Parkinson's disease, or mobility impairment due to age. Some walkers feature **\*\*wheeled\*\*** legs for easier movement, while others have **\*\*non-wheeled\*\*** legs for added stability. Many models are adjustable to fit the user's height, and some include additional features like seats, baskets, or trays for convenience.

## 9) Stergic Back Rest

### Product Description

A Stergic backrest is a support cushion or structure designed to provide comfort and support to the back while sitting.

### Product Details

A Stergic backrest is a support system designed to provide comfort and proper posture while sitting, typically used on chairs, sofas, or beds. It helps reduce strain on the spine and lower back by maintaining the natural curvature of the spine. Backrests can be built into furniture or added as adjustable cushions or pads. Some models are ergonomic, with features like lumbar support to alleviate back pain, while others are designed to provide general comfort. They are commonly used by people with chronic back issues, those recovering from injury, or anyone who spends long hours sitting. Portable backrests can be used in cars, office chairs, or even as adjustable pillows for added support. Regular use of a proper backrest can prevent long-term back discomfort and improve overall posture.

#### 10) Stergic Hot Water Bag

#### Product Description

A Stergic hot water bag is a rubber or plastic pouch filled with hot water, used for soothing muscle pain or cramps.

#### Product Details

A Stergic hot water bag is a flexible container, typically made from rubber, silicone, or plastic, filled with hot water to provide soothing relief for pain, muscle stiffness, and discomfort. The bag is sealed to retain heat and can be applied to various areas of the body, such as the back, abdomen, or joints. Hot water bags are commonly used for easing menstrual cramps, muscle aches, arthritis pain, or general tension. They work by increasing blood circulation to the affected area and relaxing tense muscles. Some hot water bags come with covers for added safety and comfort, preventing burns or discomfort from direct contact. When using a hot water bag, it's essential to handle it carefully to avoid leaks, burns, or injury.

## 11) Stergic Coccyx Cushion

### Product Description

A Stergic coccyx cushion is designed to relieve pressure on the tailbone, offering comfort and support for individuals with coccyx pain.

### Product Details

A Stergic coccyx cushion is a specially designed cushion that provides relief for individuals experiencing pain or discomfort in the tailbone (coccyx) area. It is typically made from memory foam, gel, or other supportive materials that help reduce pressure on the tailbone while sitting. The cushion often features a cut-out or contoured shape at the back to relieve pressure directly from the coccyx, promoting better posture and comfort. Coccyx cushions are commonly used by people recovering from coccyx injuries, those with conditions like tailbone pain (coccydynia), or individuals who sit for long periods, such as office workers or drivers. Many models are portable, lightweight, and include removable covers for easy cleaning. Regular use can significantly improve sitting comfort and reduce tailbone strain.

**About Royal Sense Limited:** Royal Sense Limited is a leading provider of innovative diagnostic solutions for healthcare professionals worldwide. With a focus on quality, reliability, and accessibility, we are dedicated to improving patient care and advancing the field of medical diagnostics.
