Royal Sense Limited is excited to announce the official launch of our latest products in
Pharmaceutical Category

Here are some details you might find in the launched products:

1) AC_ECLO_P

Description : AC_ECLO_P is a combination medication containing aceclofenac and paracetamol, used to relieve pain and reduce inflammation.

Details : AC_ECLO_P is a pharmaceutical formulation that combines two active ingredients: aceclofenac and paracetamol. Aceclofenac is a nonsteroidal anti-inflammatory drug (NSAID) that works by reducing inflammation, pain, and swelling. Paracetamol, also known as acetaminophen, is an analgesic and antipyretic that helps alleviate pain and reduce fever. The combination of these two drugs provides enhanced pain relief and anti-inflammatory effects, making Aceclo P effective in treating conditions such as arthritis, musculoskeletal pain, and other inflammatory disorders. Typically available in tablet form, Aceclo P is prescribed to manage moderate pain and improve quality of life for patients suffering from pain-related conditions. It is important to use it under medical supervision to avoid potential side effects and interactions.

2) AC_ECLO_MR

Description: AC_ECLO_MR is a sustained-release tablet combining aceclofenac and muscle relaxants, used to alleviate pain and muscle spasm.

Details : AC_ECLO_MR is a sustained-release medication combining aceclofenac with muscle relaxants to effectively manage pain and muscle spasms. Aceclofenac is a nonsteroidal anti-inflammatory drug (NSAID) that reduces inflammation, pain, and swelling, making it useful for conditions like arthritis and back pain. The muscle relaxants included in Aceclo MR help relieve muscle tension and spasms, providing additional comfort and improved mobility. This combination allows for prolonged pain relief and muscle relaxation, addressing both inflammation and muscle discomfort. Typically available in tablet form, Aceclo MR is prescribed for moderate to severe pain associated with musculoskeletal disorders. It should be used under medical supervision to minimize side effects and ensure optimal effectiveness.

3)AC_ECLO_ FLAM

Description: AC_ECLO_Flam is a combination of aceclofenac and methyl salicylate, used for pain relief and inflammation reduction in musculoskeletal conditions

Details: AC_ECLO_Flam is a topical formulation combining aceclofenac and methyl salicylate, designed to provide targeted relief from pain and inflammation. Aceclofenac, a nonsteroidal anti-inflammatory drug (NSAID), reduces inflammation, pain, and swelling associated with musculoskeletal conditions. Methyl salicylate, a counterirritant, works by producing a warming sensation that helps alleviate pain through local irritation and increased blood flow. This combination enhances the overall effectiveness of the treatment, making Aceclo Flam suitable for managing conditions such as arthritis, back pain, and muscle strains. Applied directly to the affected area, it offers localized pain relief without systemic side effects. It should be used according to medical advice to ensure safety and efficacy.

4) CINAZI 250

Details : Cinazi 250 is an azithromycin 250 mg an antibiotic used to treat bacterial infections, including respiratory and skin infections, and sexually transmitted diseases.

Description: Cinazi 250 is an azithromycin 250 mg a macrolide antibiotic commonly used to treat a variety of bacterial infections. It works by inhibiting bacterial protein synthesis, thereby stopping the growth and spread of bacteria. This medication is effective against a range of infections, including respiratory tract infections (such as pneumonia and bronchitis), skin infections, ear infections, and certain sexually transmitted infections like chlamydia and gonorrhea. Azithromycin is typically prescribed for a short duration, often in a daily dose for 3 to 5 days, depending on the infection being treated. It is usually well-tolerated, but possible side effects include gastrointestinal upset, nausea, and allergic reactions. It is important to complete the full course of treatment as prescribed to ensure the infection is fully eradicated and to prevent resistance.

5) CINAZI 500

Details : Cinazi 500 is an azithromycin 500 mg an antibiotic used to treat bacterial infections, including respiratory and skin infections, and sexually transmitted diseases.

Description: Cinazi 500 is an azithromycin 500 mg a macrolide antibiotic commonly used to treat a variety of bacterial infections. It works by inhibiting bacterial protein synthesis, thereby stopping
